Corn Refiners Association Survey

Topline Results

Author: Jayson Lusk

Date: 1/20/19

This document gives variable definitions and coding of response categories for a nationwide U.S. of 1,290 respondents who met exclusionary criteria (see full report for details). The variable “wts”, when applied to means, forces the sample to match the U.S. population in terms of the distribution of gender, age, education, and region of residence. The variable “ID” is an internal code used to track participants.
